

Our Infrastructure

Our firm is outfitted by a sound infrastructure unit where all the transactions of the company are held. Our infrastructure has up to date machines which are easy to function and possess large productivity which makes it easier for us to carry out huge projects. As it is spread over a huge area of land, we have parted it suitably into several departments to hold out our occupational operations smoothly.

“Why OMEGA ABRASIVES ?”

Manufacturing

Wide range
of Products

Customised
Special Products

On time Delivery

Flap Wheel

Wooden
Bush

Size (dia) : 100 mm – 250 mm
Thickness : 25mm – 75mm
Bore : Wooden Bush_16mm
Grit : 36 - 1000

Lead
Bush

Size (dia) : 100 mm – 250 mm
Thickness : 25mm – 75mm
Bore : Lead_16mm
Grit : 36 - 1000

Flap
Wheel
31.75

Size (dia) : 100 mm – 200mm
Thickness : 25mm – 100mm
Bore : PVC_31.75mm
Grit : 36 - 1000

OMEGA ABRASIVES

Manufacturer of Abrasives Products
& Supplier of Industrial Needs

Why Us?

Today, our corporation is enjoying a good rank in the industry because of the reason that of our skill of providing supreme quality products to the valued customers

Non Woven Flap Wheel

Non-woven flap wheels are versatile abrasive tools designed primarily for surface finishing, cleaning, and light deburring. Unlike traditional sandpaper or grinding wheels, they are made from flexible nylon fibers impregnated with abrasive grains, which allows them to conform to irregular shapes and contours without gouging the material.

Grade : Fine, Medium & Rough

Omega Abrasives Built with the best

"We partner industrial leading brands to source the finest raw materials. Our products are crafted with these high quality components ensuring exceptional and reliability.

See our trust partners below."

◀◀ We Focus Smooth Business
With 100% Client Satisfaction

**"Industrial Strength. Precision Finish.
The Ultimate Abrasive Collection."**

SPECIAL PRODUCTS

Conical Mops

Conical Mops (also known as Tapered Abrasive Flap Mops) are specialized polishing and sanding tools designed for precision work. Because of their unique cone shape and pointed tip, they are primarily used for tasks where flat or cylindrical wheels cannot reach.

Cartilage Roll

Cartridge Rolls are specialized abrasive tools made by wrapping abrasive cloth around a central mandrel. As the outer layer wears down, it exposes fresh abrasive grains, making them highly durable and consistent for precision work.

Flap Disc_ZIRCON

Zirconia Flap Discs (often called "Zirc" or "Blue Discs" due to their common color) are the heavy-duty workhorses of the abrasive world. While standard Aluminum Oxide discs are great for general tasks, Zirconia Alumina is a high-performance grain that self-sharpen as it breaks down, making it much more durable and aggressive.
